

Transcript

This Psychology conversion course is for anyone from diverse backgrounds, but also from multiple disciplines. You don't have to have studied Psychology previously. You'll learn some of the classic Psychology theories, which will cover things like cognitive psychology, and developmental psychology, and we also have a health focus on this particular degree which will help you in any health career going forward.

One of the benefits of doing the conversion Master's is you will also undertake a research project that affords you the opportunity to see behind the curtains in some sense what psychologists actually do, how we generate our data and how we make sense of that. It also gives us an opportunity to teach you skills that you can take into other careers and other disciplines beyond the course.

Psychology Conversion Master's is taught by our academic team which includes our research-active staff and staff who have a wealth of industry experience. Our Psychology Conversion Master's, our online version of that, is taught by the same academic staff who will teach our in-person degree on campus, and this means none of our teaching is outsourced and you can expect the same teaching excellence as you would get with an in-person degree.

Our distance learning students can access the same level of support as you can expect from an on-campus version of the course that includes regular feedback from our tutors but also some of the wider things like academic skills support, wellbeing support and disability support as well.

There are many reasons why someone would want to work in psychology. At the moment in the area, there's a skill shortage and that affords you the opportunity for greater career prospects moving forward. Many of our students would like to work in psychology because it affords them the chance to understand themselves a little bit better but also the world around them and see how they can make the world a better place.

Dr Chris Neale, Senior Lecturer in Psychology, and Psychology (Conversion) MSc Course Leader.
